

EZ-STAND

VERSATILE STAND-UP POUCH SOLUTIONS. STAND UP. STAND EASY. EZ-STAND.

PRODUCES STAND-UP BAGS ON A STANDARD VFFS BAGGER.

EZ-Stand was developed to create stand-up packages on a vertical bagger. EZ-Stand incorporates a unique U-shaped bottom gusset panel applied to film web that produces a stand-up pouch during the sealing operation.

EZ-Stand requires minor machine modifications to VFFS baggers. Specially designed interchangeable tooling (sealing jaws and a forming collar) often are the only changes required.

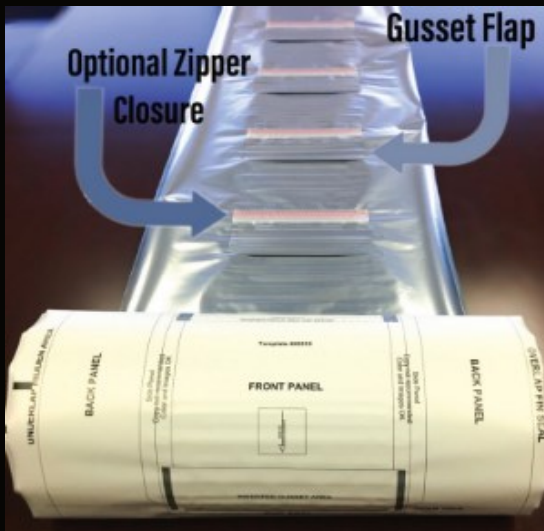

How IT WORKS:

A bottom gusset panel is pre-applied to a standard film web during the film converting process. This bottom gusset panel becomes the bottom of the packaged during the sealing operation when sealed with a special set of sealing jaws.

The sealing jaws create a seal around the bottom gusset panel which becomes the bottom of the bag.

EZ-Stand bags can range in width from 4" to 14".

BENEFITS INCLUDE:

- ✓ **Create attention-grabbing stand up bags on existing VFFS baggers.**
- ✓ **Minimal or no changes to your bagger.**
- ✓ **Minimal capital investment in tooling.**
- ✓ **Production speeds higher than standard pouch machines.**
- ✓ **Fast return on investment than a pouch machine.**
- ✓ **Recloseable zippers, hole punches, laser scoring or tear notches can be included.**

Southwest Formseal is the industry expert on EZ-Stand design. Our strong partnerships with OEM bagger manufacturers and film convertors allow you to be up and running quickly. Our 44 years of experience, our strong engineering and design team as well as our manufacturing expertise will provide the you the support you require from the design phase through testing and into production.
